

Supportive and Palliative Care Indicators Tool (SPICT-4ALL-.....)

Your translated text goes after each line in English

The SPICT helps us look for people who have life shortening health conditions and are less well. These people need more help and care now, and a plan for care in the future.

Does this person have signs of poor health or health problems that are getting worse?

- Urgent or emergency hospital admission(s) or visits.
- Less able to manage usual activities; not as well as they used to be.
(Person often stays in bed or in a chair for more than half the day.)
- Needs more help and care from others due to increasing physical and/or mental health problems.
- Person's carer needs more help and support.
- Has clearly lost weight over the last few months; or stays too thin.
- Has troublesome symptoms most of the time despite good treatment of their health problems.
- The person (or family) asks for palliative care; chooses to reduce, stop or not have treatment; or wishes to focus on quality of life.

Does this person have any of these health problems?

Cancer	Heart or circulation problems	Kidney problems
Less able to manage usual activities and health is getting poorer.	Heart failure or heart blood vessel disease. Short of breath or has chest pain when resting, moving or walking a few steps.	Kidneys are not working well; general health is getting poorer.
Not well enough for cancer treatment or treatment is to help with symptoms.	Leg problems due to poor blood circulation; surgery is not possible.	Stopping kidney dialysis or choosing palliative care instead of starting dialysis.
		Stopping or not starting dialysis
Dementia or frailty	Respiratory problems	Liver problems
Unable to dress, walk or eat without help.	More unwell with long term lung problems. Short of breath when	Worsening liver problems in the past year with complications like: • fluid building up in the

	resting, moving or walking a few steps even when the chest is at its best.	belly • being confused at times • kidneys not working well • infections • bleeding from the gullet
Eating and drinking less; difficulty with swallowing.	Needs to use oxygen for much of the day and night.	
Has poor control of bladder and bowels.	Has needed treatment with a breathing machine in hospital.	
Not able to communicate by speaking; not responding much to other people.		
Frequent falls; fractured femur.		
Frequent infections; pneumonia		
Nervous system problems	Other conditions	
Physical and mental health are getting worse.	People who are less well with other life shortening physical or mental illnesses or health conditions. There is no treatment available or it will not work well.	
More problems with speaking and communicating; swallowing is getting worse.	What we can do to help this person and their family.	
Chest infections or pneumonia; breathing problems.	Start talking with the person and their family or carer about help needed now and why making plans is important in case things change.	
Ongoing disability with increasing physical and/or mental health problems	Ask for help and advice from a nurse, doctor, social worker or other staff if the person or family needs a review of their care and support.

after one or more strokes.	
	We look at the person's medicines and other treatments to give the best care. Holistic care includes symptoms, emotional, social, functional, financial, spiritual, cultural problems.
	Ask for specialist help if symptoms or problems are difficult to manage.
	Care plans are shared with staff who need to see them and kept up to date.
